

## JOB OFFER

<b>Position in the project:</b>	<b>Post-doc</b>
<b>Scientific discipline:</b>	Biology, biotechnology, biochemistry, medicine
<b>Job type:</b>	employment contract: full-time
<b>Number of job offers:</b>	1
<b>Remuneration:</b>	8,500 PLN per month (expected net salary ~6,000 PLN = ~1,350 EUR)
<b>Position starts on:</b>	01.11.2018
<b>Maximum period of contract:</b>	1 year (max 3 years)
<b>Institution:</b>	Institute of Molecular Biology and Biotechnology, Faculty of Biology, Adam Mickiewicz University
<b>Project leader:</b>	Krzysztof Sobczak, PhD
<b>Project title:</b>	<i>Pathogenesis driven by RNAs with expansion of trinucleotide repeats: mechanisms and therapeutic strategies</i> <b>Project is carried out within the TEAM programme of the Foundation for Polish Science</b>
<b>Project description:</b>	<p>The post-doc position is available in Department of Gene Expression of Adam Mickiewicz University which is the largest institution of higher education in Poznań and one of the largest and best institutions of higher education in Poland.</p> <p>A highly motivated researcher is sought to join the human molecular genetic research team under the supervision of Krzysztof Sobczak, PhD. We focus on studying the molecular pathomechanism and experimental therapy of hereditary neuro-muscular disease (myotonic dystrophy; DM) and neurodegenerative disorders (fragile X-associated tremor/ataxia syndrome; FXTAS).</p> <p>DM1 is an RNA dominant disorder caused by expansion of a CTG repeat in the 3'-UTR of the DMPK gene. The DMPK transcripts containing highly expanded CUG repeats (CUG<sup>exp</sup>) are retained in the nucleus in discrete foci. Their nuclear retention is partly a function of the interaction of CUG<sup>exp</sup> RNA with poly(CUG) binding proteins, such as, splicing factors in the Muscleblind-like (MBNL) family. The pathogenic effects of CUG<sup>exp</sup> RNA are due in part to sequestration of MBNL proteins, which results in is regulated alternative splicing that these proteins normally regulate.</p> <p>In our research we focus on deeper understanding of some aspects of molecular pathomechanism of DM and FXTAS, especially associated with miRNA metabolism, function of specific splicing factors, abnormalities in translation (RAN translation) as well as application of antisense oligomers or small compounds to disrupt pathogenic interaction of CUG<sup>exp</sup> (DM) or CGG<sup>exp</sup> (FXTAS) with proteins in vitro and in vivo.</p>

<b>Key responsibilities include:</b>	<ol style="list-style-type: none"> <li>1. Experiments explaining the mechanism of RNA recognition by MBNL proteins and regulation of alternative splicing by MBNLs.</li> <li>2. Experiments explaining the mechanism of RAN translation of expanded CGG repeats.</li> <li>3. Genetic screening of genes regulating both processes (1 and 2).</li> <li>4. Screening of small compounds and antisense oligonucleotides targeting expanded CGG repeats in RNA.</li> <li>5. Participation in preparation of manuscripts and grant proposals.</li> </ol>
<b>Profile of candidates/requirements:</b>	<ol style="list-style-type: none"> <li>1. The successful candidate must have a Ph.D. degree in biology, biochemistry, genetics, computational biology or related life science field, love and enthusiasm for science, ability to work independently as well as collaboratively, strong organizational and communication skills, and a record of productive research;</li> <li>2. Proven record of productivity and publications in high-impact journals;</li> <li>3. Experience in human molecular genetics, molecular and cellular biology, and statistics;</li> <li>4. This position is ideally suited for a candidate who is primarily trained in experiments with mouse models (behavioral examination, immunohistochemical and immunocytochemical techniques, in vivo delivery of nucleic acids);</li> <li>5. Experience of a combination of other techniques: DNA cloning, in vitro assays, RT-PCR, real-time PCR, northern blot and all types of electrophoresis, western blot, immuno-affinity pull downs, deep sequencing.</li> </ol>
<b>Required documents:</b>	<ol style="list-style-type: none"> <li>1. Professional CV including scientific achievements.</li> <li>2. Copy of PhD diploma.</li> <li>3. List of publications.</li> <li>4. Letter summarizing previous work experience and future interests.</li> <li>5. Contact information for two professional references.</li> </ol>
<b>We offer:</b>	<ul style="list-style-type: none"> <li>• A broad range of experimental methods are employed in our laboratory, including microarray hybridization, next generation RNA/DNA sequencing, fluorescence in situ hybridization; DNA/RNA purification, cloning, genotyping, sequencing and hybridization; protein immunoblots, immunoprecipitation, and immunohistochemistry; tissue culture, transfection and transduction of cells, confocal microscopy, single molecule microscopy, drug screening, and experiments with mouse models.</li> </ul>
<b>Please submit the following documents to:</b>	<a href="mailto:ksobczak@amu.edu.pl">ksobczak@amu.edu.pl</a>
<b>Application deadline:</b>	15.10.2018, 23:59:59

Please include in your offer:
